MORPHICK MANAGED ENDPOINT DETECTION & RESPONSE SERVICE

Powered by Endgame

THE CHALLENGES:

- Defensive security technologies fail to prevent advanced attackers from accessing enterprise networks. Once attackers have infiltrated, these solutions fail to detect them before damage and loss of critical assets.
- Reducing time to detect and contain resident adversaries is essential to protecting enterprises from financial and reputational loss.
- Finding, training and retaining world-class advanced threat hunters can seem nearly impossible. Technology alone will not address the problem when you are battling people.

THE SOLUTION:

- Two industry-leading security providers, Morphick and Endgame, have partnered to deliver the industry's most advanced and effective Managed Endpoint Detection and Response (Managed EDR™) service.
- The Managed EDR™ service combines Morphick's best-in-class managed detection and response services with Endgame's industry-leading EDR platform to deliver:
 - Continuous endpoint threat monitoring & prevention
 - Advanced threat detection
 - Detailed forensic investigation and threat validation
 - Proactive threat hunting
 - NSA-CIRA accredited incident response services
- The Morphick Managed EDR™ service closes the protection gap by preventing advanced attacks at the earliest stages of the cyber kill chain and by detecting and evicting resident adversaries that evade defenses.
- Morphick detects and responds, partnering closely with your security team and incident responders to dramatically reduce the time and cost associated with effectively mitigating attacks.

THE MORPHICK MANAGED EDR™ SERVICE

MANAGED ENDPOINT PROTECTION

Earliest Prevention and Accelerated Detection

Reduce security incidents and impact. Backed by Endgame's pre-exploit prevention, machine-learning based malware protection, and adversary technique detection, Morphick prevents and detects at the earliest stages of the attack lifecycle.

Precision Response

Rapidly triage and isolate malicious activity before business disruption occurs. Through Endgame's surgical response capabilities, Morphick provides immediate containment, detailed notifications, and recommendations.

Morphing Defenses

Implement adaptive defenses. Morphick utilizes Endgame's visibility and flexibility to dynamically adjust defenses and detection capabilities based on adversary patterns and the dynamic threat environment.

ADVANCED THREAT HUNTING SERVICE

Proactive Detection

Move beyond Indicators of Compromise (IOCs). Endgame enables Morphick analysts to effectively hunt for known and unknown threats across all layers of the operating system and device memory, while remaining invisible to the adversary, reducing dwell times from days to seconds.

Scalable and Efficient

Shift threat hunting from an occasional activity to a continuous, scalable, and efficient process across all endpoints, without adversely impacting business users or the network.

Validated Notifications and Recommendations

Reduce noise by receiving validated threat notifications, based on a deep understanding of your environment and your adversaries, accompanied by a set of specific policy or architecture recommendations.

MANAGED BY MORPHICK'S 24X7 THREAT INTELLIGENCE CENTER EXPERTS

Morphick Managed EDR™ is delivered by Morphick's 24x7 US-Based SOC. Our analysts provide complete monitoring, maintenance, investigation, and remediation of all events, working closely with your security team.

INTEGRATION WITH MORPHICK'S SUITE OF MANAGED DETECTION AND RESPONSE (MDR) SERVICES

MANAGED ENDPOINT PROTECTION

The Power of Managed EDR™ combined with Morphick Managed Network and Email

Endgame's capabilities combined with Morphick's network and email capabilities allow attackers to be detected, tracked, and contained at every phase of the cyber kill chain.

Unified detection and response capabilities allow:

- Network attacks to be detected, isolated to a specific endpoint, and remediated.
- Endpoint attacks to be detected, command and control channels analyzed, and lateral movement identified in order to more effectively scope and respond to attacks.

Comprehensive visibility and detection

Integrated Analytical Pivoting capabilities across endpoint, network and email allows analysts to track attackers as they change tools, tactics and procedures during an attack to more accurately and quickly scope, contain and remediate attacks.

About Morphick

Morphick provides security Managed Detection and Response (MDR) services to organizations globally. Morphick's proven approach combines attack detection, threat hunting, incident response, and tailored threat intelligence to deliver morphing defensive postures. The Morphick service provides multiple types of network security monitoring, full packet capture, and agentless endpoint threat-hunting capabilities. All events are aggregated on the Morphick Defense Platform and are monitored, validated, and remediated by US-based dedicated security analysts in the Morphick Threat Intelligence Center. Organizations can also leverage Morphick's NSA CIRA-Accredited Incident Response services for breach response support. Morphick provides threat intelligence for deep intelligence gathering and analysis, and other incident response services such as malware reverse engineering and customer signature development.

About Endgame

Endgame is a leading endpoint security platform that enables enterprises to close the protection gap against advanced attacks and detect and eliminate resident adversaries. Endgame transforms security operations teams and incident responders from crime scene investigators into hunters that prevent damage and loss, and dramatically reduce the time and cost associated with incident response and compromise assessment. Our IOC-independent platform covers the entire attack lifecycle, leveraging machine learning and data science to uncover, in real-time, unique attacks that evade traditional defenses and respond precisely without disrupting normal business operations.
